Overview

Active Data Calendar recognizes that some clients would like to further customize the Calendar's look and feel with styles outside of the options provided in the Configuration tab where various hexadecimal values can be set for items like block, row and font colors, etc.

Please use the following list of Calendar styles currently supported in version 3.9.1 to develop a custom style sheet that is absolutely linked in the html header file uploaded in _Configuration: Custom Graphic Settings_.

Calendar Grids, .Title Styles & the List View Title

Style	Description
.calendarcell	Changes the day cells
.calendarcellhilite	Color of the day that the user is hovering over
.calendarnowdiv	Main div on the calendar now (Grid View) page
.dayheader	Controls the color of the cell that contains the day of the week
.title	Controls the titles of the sections (All Categories, Month and year of the calendar)
.otherday	This style controls the style of grid cells not being used on the Grid View
.calendarnowdiv a	Controls the way a link looks on the Grid View.
.calendarnowdiv a:hover	Controls the way a link looks when it's hovered over on the Grid View

List View Small Grid

Style	Description
.titleSmallGrid	Controls the title on the small grid (Month and year of the calendar)
.dayheaderSmallGrid	Changes the formatting of the day (Su, Mo, Tu, etc...)
.calendarcellhiliteSmallGrid	Color of the day that the user is hovering over
.otherdaySmallGrid	This style controls the style of grid cells not being used on the list view small grid.

List View Headings

Style	Description
.listtableheadertext	Heading of the list view section (XXX View, Dates displayed)

Error Messaging Styles

Style	Description
.errormessagetext	Controls the style of the error messages.

List View Text

Style	Description
. eventlistdiv a	Controls the way a link looks on the List View.
. eventlistdiv a:hover	Controls the way a link looks when its hovered over on the List View.
.listcolumnheadtext	Column header for the data displayed in the list
.listheadtext	Format for the heading of each individual day.
.detailsview	Formatting for the details section of the event detail page.
.listbodytext	Main Event List information under each day.

Quick Tip Styles *(Pop up on events)

Style	Description
.bodycopy	[same as above style] Main text
.dayheader	[same as above style] Quick tip event heading
.quicktipborder	This is used to color the Quick Tip Border and the color matches the color used for the ".dayheader" class.
QUICK TIP STYLE NOTE: The view link is hardcoded to be bold text and underlined; when rolled over the underline disappears. The table for the quick tip is hard coded to have 1px borders that are the named color "Gainsboro".	

Other Styles

Style	Description
.bodycopy	Main text on all pages
.textboxcopy	This style controls textbox field styling.
.quicktipborder	This is used to color the Quick Tip Border.
BODY	The main formatting for the body tag.
TABLE, DIV	This class is used so em font sizing is handled correctly on front end calendar views.
SELECT	Formatting for the select boxes.
